

Let's Go Paper free!

Nope!

We can help!

Mobilized processes used to be only for firms with big budgets and IT departments. MapToTrack eliminates the manual paper process, big budgets and the need for inhouse development. Whew!

Got paper forms?

Let's get rid of them now! The great thing about getting rid of paper forms (*aside from having a ceremony lighting them on fire*) is that you can customize the information you actually need and get rid of the rest. The mobilized information gets to the people, partners, and customers when and how they need to receive the information.

Really serious cost savings

The Return on Investment (ROI) is kind of embarrassing. Seriously. That's okay. We all do our best with what we know at the time. When we learn something new that is better, simple, and affordable, well heck, that is the way to go. When you consider the cost of manually filling out a piece of paper, copying, transcribing, it - well, it goes on and on... if someone doesn't believe you, we have a whole section on analyzing cost. :) Just email us at support@maptotrack.com for the intel.

Keep it simple

We have certainly built very technical and scientific data-collection apps over the years which got the jobs done for those who need that information. **But**, what we know is that simple wins for many other industries and we like to keep it that way. It is pretty fun for everyone. Imagine that, smiling after you uploaded a form! :)

So, let's get started with your solution

The easiest way to start is to look at the forms you fill out for customers, clients, and partners. Then think about where those forms go. Are they transcribed into additional systems or sent to someone who needs to respond or both? Think about contract compliance - do you have to submit documentation to get paid? How long does that take? Think about your quality control program; employee training; documentation employees must prepare for their work - remember it is usually more than timesheets that they are generating. Is the information consistent? Uniform? There are lots of things to think about! **First, think about what is costing you money right now and focus on that.** Have a look at the worksheet on the next page to get started.

Paper Free Planning, oh yeah!

Process or form: _____

Why? _____

Where does it go? _____

How many people touch it (no pets) : _____

Estimated costs: Think about design, filling out, transcription, copying, mailing, etc. (email us for aspirin...)

\$ _____

.....

Now the fun stuff

Write out a short description of the process the form provides today and how it could be better. Then check off the features below that would make this process better if it were digitized & mobilized. The form burning ceremony can be scheduled later.

Start here:

Features

| | | | | | | | |
|-------------------------------|-------------------------------|----------------------------------|--------------------------------|---|--------------------------------------|------------------------------|---------------------------------|
| <input type="checkbox"/> name | <input type="checkbox"/> date | <input type="checkbox"/> address | <input type="checkbox"/> phone | <input type="checkbox"/> email | <input type="checkbox"/> location(s) | <input type="checkbox"/> GPS | <input type="checkbox"/> photos |
| text boxes | Y N | app in an app* | Y N | <input type="checkbox"/> reverse geocode (shows address) | <input type="checkbox"/> videos | | |
| choice fields | Y N | map app* | Y N | <input type="checkbox"/> worker role e.g, tech, Inspector, etc. | <input type="checkbox"/> audios | | |
| drop down | Y N | timesheet, etc. | Y N | <input type="checkbox"/> NFC | | | |
| repeat record | Y N | work order | Y N | <input type="checkbox"/> QR | | | |
| | | | | <input type="checkbox"/> Barcode | | | |

**app in an app - the first app contains triggers, such as a set of scores. If a certain score is selected, it opens another app, such as a "Plan of Action" that opens for more information and distribution for action, such as departments to receive, respond and reply*

**map app - is created with a set of addresses or points with latitude and longitude to plot bus stops, manholes, or any other item that needs to be serviced as an example. When that point is selected, the actual form to record the work opens, prepopulating the location and description, plus the items to be serviced.*

Add additional notes here:
